

- slicing (with blade)
- cutting along an edge (using flat side)
- could be used to line something up: has a straight edge
- it kind of looks like it could along a curved edge, by aligning the notch with an edge?
- can opener-like
- has a hole in the flat-side -> it could be spun or attached to another tool
- blade can move on its hinged axis (variable angle)
- cutting a straight line: again by aligning flat edge with the blade facing down over the edge
